Luna XIO

Supply Chain Visibility 2.0
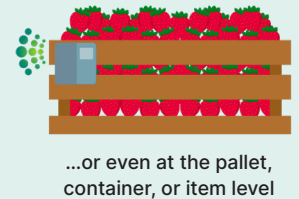

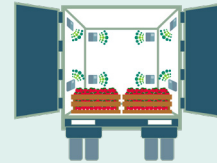

The Challenge:
Perishable Goods in Transit

Perishable items like food face high transportation risks. Of the 31% of US food production lost annually ($162 billion), most is due to spoilage before reaching store shelves.

Regulatory compliance

Supply Chain Visibility 2.0

Imagine real-time monitoring of your entire supply chain. Temperature, humidity, and location data seamlessly combine to provide a complete view of goods' condition. Detect and address temperature issues early, ensuring regulatory compliance, saving resources, and protecting your brand.

Monitor conditions in real-time at various points within a trailer...

...or even at the pallet, container, or item level

Real-Time Condition Monitoring with Luna XIO

Luna's award-winning solution offers affordable and convenient real-time visibility:

- Temperature, humidity, and other sensor data down to pallet/package level
- Enhanced visibility across the entire supply chain
- Seamless integration with barcode scanners and other workplace devices, which serve as secure data gateways
- Proactive real-time alerts
- Zero-touch: It just works without requiring additional staff effort
- Durable, cost-effective indoor/outdoor sensors
- Access critical information for a fraction of the cost of traditional hardware-centric solutions — also available as a managed service

The Luna Advantage

Simple: Easily integrates with existing operations with no costly hardware, complex installations, or workflow disruptions. App transforms barcode scanners and other mobile devices into data gateways to provide real-time insights.

Secure: Patented encryption protocols ensure the security of your perishables *and* data.

Seamless: Redundant data communication and minimal infrastructure requirements ensure cost-effective and hassle-free deployment for IT and operations teams.
